Press Release

March, 2008

Intrinsic Perennial Gardens, Inc. is excited to announce the introduction of a new Big Bluestem Grass.

Andropogon gerardii 'Red Bull' is a seed strain that we developed for more intense fall color. In summer the foliage can take on some red highlights followed a more prominent red fall color in October and November. The upright clumping plants grow 5-6' tall and prefer a well drained soil in full sun. Their hardiness is zone 3-9. For more information contact Brent Horvath at 800-648-2788 ext. 15 or brent@intrinsicperennialgardens.com.
