

Autumn Charm™ Sedum 'Lajos' PP#14,421

Recommendations for Propagation/Field Production

Propagation of this patented plant is encouraged.

Cuttings should be approximately 2-3" and done in Spring or early Summer. (This plant has been tried in tissue culture and has not been successful.)

Keep the cuttings on the dry side. Full sun to light shade is best.

We mulch with sand in the field to keep soil off the foliage and keep leaf spot diseases to a minimum.

Average increase on a single rooted cutting lined out or potted in June/July is 3-4 shoots in spring the following year.(3-4:1 per year)

Recommendations for Potted Production

Pot in Spring to early Summer for Fall/Spring Sales

We top dress fertilize both in containers and in the field.

Licensing Fees

Based on company (licensees) yearly sales.

Small - under 1 million in sales	\$100 includes 70 cuttings, no plants \$50

License includes use of trade name.

Call Brent for availability. 800-648-2788. Currently we are prebooking orders for 2007.

Autumn Charm TM Sedum 'Lajos' PP#14,421

General Information

Light:	Full sun to light shade.
Soil:	Prefers well drained soil.
Height:	18"+
Hardiness:	Zone 4-9
Foliage:	Creamy yellow edge with blue green centers.
Bloom Time:	Mid September
Flower:	Russet red just like 'Autumn Joy' but later to color up

This plant is a sport of 'Autumn Joy'.

The flower buds in first year plants do not always color red but stay white to a blush pink.

Due to the yellow variegation, aphids are very attracted to this plant. Some sort of preventative or maintenance program should be considered.

One in 50 to 100 plants sport a thin green edge with a yellow center. By patent law we own this plant also. This will be introduced with its own trade name. The variety name is 'Beka'.
